Introduction

RecyPy is a web application used for sharing recipes. Similar to a cross between a social media app and a recipe database, in this system users will be able to create an account. Using this account, they will be able to post their own recipes, as well as “follow” other users or “star” their recipes. This creates a personalized experience for each user, as well as a foundation for further implementations, such as a rating system for individual recipes and the ability to categorize them. Users will be able to view a feed of recipes from the people they follow, as well as search new recipes in the search bar.

This document provides working domain models for the application, as well as tables summarizing relevant classes and their relationships.

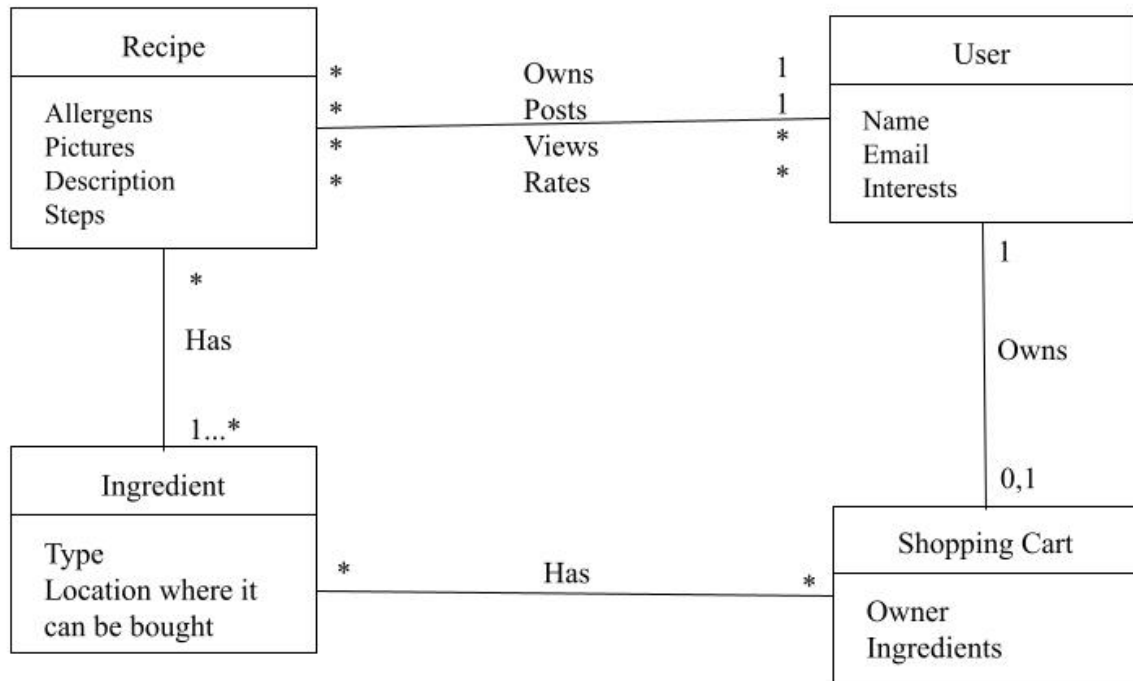

Overview of Classes

Class Name	Attributes	Functions
Ingredient	- Type - Locations where it can be bought	
Recipe	- Allergens - Pictures - Description - Steps	
Shopping Cart	- Owner - Ingredients	- Add ingredient - Remove ingredient
User	- Name - Email - Interests	- Post recipe - Navigate to buy ingredient - View recipe - Rate recipe
Advertiser	- Name - Company	- View shopping cart - Show advertisements to user
Advertisement	- Related ingredient - Target user - Text - Image - Link
