

Sprint Review 5

- Features Implemented
 - Search page: the search page allows users to search recipes using recipe name, tags, ingredients, or description.
 - Feed page: The feed page shows a preview of recipes on the home page.
 - Recipe review page: A page where users can review detail recipes as the feed only display previews.
 - Header and side navigation bar
- Issues fixed
 - NA
- Implementation review:
 - The members discussed the app's functionality and took decisions about the most relevant features to provide. The search tab, feed functionality, recipe review page, header, and side navigation bar are among the functionalities decided on.
- Changes Made
 - Updated html of pages
 - Minor changes were made to sequence diagram, domain model, and configuration management documents based on feedback from deliverable 4
 - Included a guideline for dependencies based on feedback from deliverable 4.
- Plans for next sprint.
 - Three members will be focusing on finalizing the front-end design.
 - Two members will work on the back end.
- Scrum Review
 - All dev members showed their work, and the product owner and scrum master took part in the discussion to decide if everything was up to par.
 - We will validate the app development so far in the next sprint and add other functionalities as required to get it ready for the final presentation.
