

Sprint Review 3

- Features Implemented
 - Added in functionality to add new recipes, including ability to
 - Add steps to recipe
 - Add ingredients to recipe
 - Added a basic display card setup for recipes
- Issues Fixed
 - Diagnosed and dealt with various local setup issues around the database
 - Revised the use case model document according to feedback
- Implementation Review
 - The members discussed a number of problems in getting the app running locally. A database was set up in Docker, and most of the problems stemmed from missing dependencies on the group members' machines.
- Changes Made
 - Minor revisions to use case diagram document, including removing "optional" tags
- Plans for Next Sprint
 - Three members will continue to work on filling out the front end of the website, specifically focusing on building out the home page further
 - Two members will continue developing the back end, adding in any missing API functionality necessary
- Scrum Review
 - All group members showed their work to date and briefly discussed whether it was all up to par. Several members were having issues with dependencies, so a significant amount of time was spent in the scrum discussing and trying to resolve those problems. In this sprint, the distribution of work seemed to go more smoothly, as all members had tasks to focus on. Next sprint, we hope to maintain this momentum.
